

“DIE BUTTON EXTRACTOR”

ABSTRACT OF THE DISCLOSURE

5 The present invention provides a die button assembly for locating a die
button relative to a body die, and for facilitating removal of the die button from the body
die. The assembly includes a substantially cylindrical button having a volumetrically
reduced region and a complementary, internally threaded die button extractor having a
foot portion extending into the volumetrically reduced region and facilitating removal of
10 the button from the body die via an upward force applied to the internally threaded
portion.
